

Operation Blueprint Worksheet

Everything you run, in one document — so your app can be rebuilt around how the operation actually works.

How to fill this out

- Print it and write by hand, or open the PDF in Microsoft Edge and use the pen/text tools — both work. Photos of filled pages are fine too.
- Write like you talk. Bullet points, half-sentences, arrows — all fine. Don't polish anything.
- Skip anything that doesn't apply. Cross out sections you don't care about — that's useful information too.
- If a question makes you think “it depends”, write down what it depends on. That's the gold.
- Real examples beat descriptions. “Last Tuesday I had to...” is worth more than a general answer.
- Budget 45–90 minutes. Do it in two sittings if needed. Sections 2, 12, and 13 matter most.
- When you're done, give the file (or photos of it) back to Claude along with the items in Section 17.

1. The operation at a glance

List every part of the operation you're responsible for — even the small stuff.

Course, restaurant/F&B, pro shop, employees, pesticides, fuel tanks, porta potties, assets, purchases, repairs, paperwork, tournaments, the Wednesday graduation party... and whatever else isn't on that list.

Who works here? Name, role, and what they own day-to-day.

Include yourself. Note who is seasonal, who is part-time, and who would actually open the app.

Besides you, who should use the app — and what should each person see or NOT see?

E.g. "crew should only see their tasks", "GM sees money", "pro shop kids just see their schedule".

What are your busiest and slowest months? When does the season start/end?

2. Your week — the rhythm of the operation

Walk through a normal week in season. What happens on each day, every week?

Day	What always happens (and when)
Wednesday	Graduation party at the restaurant — setup 0900, party 1100–1400, ~80 people, F&B staff of 3
Monday	
Tuesday	
Wednesday	
Thursday	
Friday	
Saturday	
Sunday	

Now the monthly / quarterly / yearly obligations. What HAS to happen and when?

Reports you owe someone, inspections, tank readings, inventory counts, pesticide reporting, budget submissions, fiscal-year rollover, license renewals...

What deadlines have you missed (or nearly missed) in the past year? What happened?

These become the app's loudest alarms.

3. Money, purchases & budgets

Walk through ONE real purchase, start to finish.

*From “we need X” → quote → PR → approval → order → delivery → receipt paperwork → filing. Who touches it at each step?
Where does it slow down or go wrong?*

What budgets do you track, and who asks you about them?

Cost centers, operating vs procurement, F&B budget, pro shop budget. What report does leadership actually want to see?

What money comes IN, and how is it recorded today?

Green fees, cart rentals, F&B sales, pro shop sales, tournament fees, party rentals. Is there a POS? Which one?

What's the most annoying part of the money side right now?

4. Paperwork catalog

List EVERY form or document you fill out. The app already automates PRs, SOW, Sole Source, DD-200, DD-2212, SF-52 — list those too if the flow still bugs you, plus everything not yet automated.

Form / document	What triggers it	How often	Who signs it	Where it goes
Tank inspection log	Monthly AST check	Monthly	Me	Binder in maint. office

Which paperwork eats the most time or causes the most stress?

5. Inventory & assets

What categories of “stuff” do you track (or should)?

Federal assets, turf equipment, small tools, chemicals, fertilizer, irrigation parts, shop parts, F&B stock, pro shop merchandise, fuel...

For each place inventory data lives TODAY, fill a row:

What's in it	System / site name (URL if web)	Can you export? (Excel/CSV/print)	Who owns the login / how current is it?
<i>Federal assets</i>	<i>DPAS (or old MWR property site?)</i>	<i>Yes — Excel report</i>	<i>Me; updated last October</i>

How do you count inventory today, and how often? What makes it painful?

The app has barcode scanning for assets — does the crew actually use it? Why or why not?

When something breaks or runs out, what happens?

Who notices, who orders, how long it takes, where it's written down.

6. Fuel, oil & tanks

One row per tank:

Tank / location	Product	Size (gal)	How refills get ordered	What you must log / inspect
Maint. yard east	Diesel	500	Call vendor when ~1/4 full	Monthly AST inspection + refill receipts

Who delivers fuel, how do you get billed, and what paperwork does each refill create?

Have you ever run dry or had a compliance scare? What would have prevented it?

7. Food & beverage

Describe the restaurant operation.

Days/hours, staff, menu size, who orders food/supplies, which vendors (Sysco? US Foods? Menards runs?).

The Wednesday graduation party — walk through the whole thing.

Headcount, setup checklist, food prep, staffing, billing, cleanup. What goes wrong most often?

What health / safety logging do you have to keep?

Temp logs, cleaning schedules, inspections and their dates.

What other recurring events use the restaurant or pavilion?

8. Pro shop

What does the pro shop sell, and how is merchandise tracked and reordered?

What system runs tee times / point of sale, and does anything need to flow between it and your app?

9. Course & turf

The app already has: course map with pins/photos, irrigation zones & schedules, chemical logging with REI/RUP reporting, spray windows, GDD tracking, crew scheduling, equipment service history, voice log, standards plan.

Which of those do you ACTUALLY use? Which do you ignore, and why?

Brutal honesty here shapes what gets deleted or simplified.

Pesticide application: walk through one spray day.

Planning, weather check, mixing, applying, logging, REI posting, license info. What's manual that shouldn't be?

Porta potties: how many, where, who services them, on what schedule, and what do you have to track?

Repairs — course, buildings, equipment. How does a repair get noticed, done, and recorded today?

10. Employees

What do you track (or wish you tracked) about employees?

Schedules, time off, call-outs, sick time, certifications & expiry dates (pesticide license!), training, disciplinary notes, 1:1s, onboarding.

What licenses/certifications exist in the operation and when do they expire?

Yours included. These become automatic renewal reminders.

11. Tournaments & events

List the annual events — tournaments, leagues, outings, holiday events.

Rough dates, size, and which ones create the most work.

What does event prep look like, and what falls through the cracks?

12. Deadlines that can NEVER be missed

Top 10, in order of consequence. These become the app's non-negotiable alarms with lead-time warnings.

Deadline	When	What happens if missed
<i>Section 889 vendor certs re-signed</i>	<i>Oct 1</i>	<i>Can't purchase from vendor until fixed</i>
1.		
2.		
3.		
4.		
5.		
6.		
7.		
8.		
9.		
10.		

13. What's messy — be brutal

Rank your top frustrations with the current app.

“Too many menus”, “I can’t find X”, “too many taps to do Y”, “the crew won’t use it” — whatever is true.

If the app could only do FIVE things, what five would you keep?

This defines the home screen.

What features should be deleted or hidden entirely?

Describe your perfect morning with the app.

You walk in at 6am with coffee. The app shows you _____ and you're done planning by _____.

14. Data living in other systems

You mentioned info in another site that needs to be transferred. One row per outside system:

System / site	What data is in it	Export options you can see	How often it changes
DPAS	All federal assets w/ serials & custodian	Excel report from Inquiries menu	A few times a year

For the most important one: can you log in, run an export, and save the file?

If yes — do it and include the file in the drop folder (Section 17). Even a messy export is enough to build an importer. If the site can't export, screenshots of the list pages work too.

15. Devices & environment

What devices does each person use, and where does connectivity die on the property?

Phones (Android/iPhone), tablets, the office PC, printers you must print to (schedules, forms).

16. What does success look like?

Six months from now, the rebuilt app is a home run. What's different?

Time saved, deadlines never missed, less paper, crew actually using it, leadership off your back — in your words.

17. File drop — include these with the worksheet

Make a folder next to this file (call it “worksheet files”) and drop in whatever you have:

- Blank copies (PDF or photo) of every form from Section 4 that the app doesn't already fill.
- An export or screenshots from each outside system in Section 14.
- Photos of any paper logs you keep (tank logs, temp logs, porta potty schedule on the wall...).
- A copy of the report leadership asks you for most often.
- The event calendar or tournament list if one exists anywhere.

What happens next

1. You hand the worksheet + files back to Claude.
2. Claude turns it into a blueprint: the screens, the categories, the alarms, the imports — for your sign-off.
3. The app is restructured in stages on the SAME database, so nothing you've entered is ever lost.
