

Operation Blueprint Worksheet

Everything you run, in one document — so your app can be rebuilt around how the operation actually works.

How to fill this out

- Print it and write by hand, or open the PDF in Microsoft Edge and use the pen/text tools — both work. Photos of filled pages are fine too.
- Write like you talk. Bullet points, half-sentences, arrows — all fine. Don't polish anything.
- Skip anything that doesn't apply. Cross out sections you don't care about — that's useful information too.
- If a question makes you think “it depends”, write down what it depends on. That's the gold.
- Real examples beat descriptions. “Last Tuesday I had to...” is worth more than a general answer.
- Budget 45–90 minutes. Do it in two sittings if needed. Sections 2, 12, and 13 matter most.
- When you're done, give the file (or photos of it) back to Claude along with the items in Section 17.

1. The operation at a glance

List every part of the operation you're responsible for — even the small stuff.

Course, restaurant/F&B, pro shop, employees, pesticides, fuel tanks, porta potties, assets, purchases, repairs, paperwork, tournaments, the Wednesday graduation party... and whatever else isn't on that list.

Everything on the list that you just said as well as finances for all areas but they are not combined, they all have their own separate finances. Im also in charge of spraying pesticides, schdules for employees, their clock in and out punches, and the maintenance schedule like when to mow tees, when to mow fairwaiys and greens, when to overseed, when to aerate, when to use pesticides, what pesticides to use, basically everything an 18 hole PGA golf course with a driving range and restaurant requires to operate. I am in charge of that

Who works here? Name, role, and what they own day-to-day.

Include yourself. Note who is seasonal, who is part-time, and who would actually open the app.

Right now, it is only going to be me using the app. Once it is all completed, I will add the superintendent and the food and beverage manager to the app so they can start tracking their own stuff once I believe it is in a good spot and not in its current state.

Besides you, who should use the app — and what should each person see or NOT see?

E.g. "crew should only see their tasks", "GM sees money", "pro shop kids just see their schedule".

stated above

What are your busiest and slowest months? When does the season start/end?

We basically start full operation in late march or april and then start slowing down toward the end of september or early october. However, the restaurant will be open year round and we will be adding golf simulators to stay busy in the winter. We may also open the range on occasional days if we get decent weather in the winter

2. Your week — the rhythm of the operation

Walk through a normal week in season. What happens on each day, every week?

Day	What always happens (and when)
Wednesday	Graduation party at the restaurant — setup 0900, party 1100–1400, ~80 people, F&B staff of 3
Monday	
Tuesday	
Wednesday	Hot Dog monday, we offer cheap hot dogs for golfers. The rest of the days, nothing is set in stone just yet. I want you to build this schedule out with the obligations that I have and other golf course operations so that I will be successful. Use the other information I give you in this document to determine what needs to be done on what days.
Thursday	
Friday	
Saturday	
Sunday	

Now the monthly / quarterly / yearly obligations. What HAS to happen and when?

Reports you owe someone, inspections, tank readings, inventory counts, pesticide reporting, budget submissions, fiscal-year rollover, license renewals...

Monthly tank inspections, monthly inventory for the restaurant and the pro shop, monthly revenue from both areas, showing retail sales, golf range revenue, and golf course revenue, how much was spent via the PRs per months. All of this rolled up in the fiscal year october to october, restocking inventory when it is low, again, basically everything a golf course requires

What deadlines have you missed (or nearly missed) in the past year? What happened?

These become the app's loudest alarms.

Asset inventory submissions, this is for maintenance, food and beverage, and the pro shop.

3. Money, purchases & budgets

Walk through ONE real purchase, start to finish.

*From “we need X” → quote → PR → approval → order → delivery → receipt paperwork → filing. Who touches it at each step?
Where does it slow down or go wrong?*

The PR portion is fine, however, the PRs I submit to the business office isnt always the same amount of what I actually spent. I don't know how much the order actually was until I get the receipt from the business office.

What budgets do you track, and who asks you about them?

Cost centers, operating vs procurement, F&B budget, pro shop budget. What report does leadership actually want to see?

as much detail as possible about all sales from the golf course as a whole, broken down into categories.

What money comes IN, and how is it recorded today?

Green fees, cart rentals, F&B sales, pro shop sales, tournament fees, party rentals. Is there a POS? Which one?

all of the above and then some. Yes we have a POS but there is no way to connect it to the app, we will have to upload documents or screenshots to the app.

What's the most annoying part of the money side right now?

We are not profitable

4. Paperwork catalog

List EVERY form or document you fill out. The app already automates PRs, SOW, Sole Source, DD-200, DD-2212, SF-52 — list those too if the flow still bugs you, plus everything not yet automated.

Form / document	What triggers it	How often	Who signs it	Where it goes
Tank inspection log	Monthly AST check	Monthly	Me	Binder in maint. office
everything that you listed, and I am sure there is more to come.				

Which paperwork eats the most time or causes the most stress?

The app is pretty good so far on making the paperwork less of a headache, I just want it to be easier to navigate and easier to train my people on as well as adding new paperwork that I am unaware of right now but may need in the future.

5. Inventory & assets

What categories of “stuff” do you track (or should)?

Federal assets, turf equipment, small tools, chemicals, fertilizer, irrigation parts, shop parts, F&B stock, pro shop merchandise, fuel...

all of that and then some

For each place inventory data lives TODAY, fill a row:

What's in it	System / site name (URL if web)	Can you export? (Excel/CSV/print)	Who owns the login / how current is it?
<i>Federal assets</i>	<i>DPAS (or old MWR property site?)</i>	<i>Yes — Excel report</i>	<i>Me; updated last October</i>
in a tracking system we are unable to access unless used on my government computer			

How do you count inventory today, and how often? What makes it painful?

The app has barcode scanning for assets — does the crew actually use it? Why or why not?

yes the assets are by barcode, but the inventory items for retail and the restaurant are counted by hand.

When something breaks or runs out, what happens?

Who notices, who orders, how long it takes, where it's written down.

Something breaks, someone tells me, I have to research the part and figure out what replacement to
buy from approved 889 sources, get a quote from the vendor, I have to fill out a PR, attach the PR,
Quote, and 889 form and send it to the business office. Then I have to wait for them to purchase and
then wait for delivery, and since we dont have a mechanic, I have to be the one to fix it or if I cant fix it I
have to rely on another area to come and fix it when they are available

6. Fuel, oil & tanks

One row per tank:

Tank / location	Product	Size (gal)	How refills get ordered	What you must log / inspect
Maint. yard east	Diesel	500	Call vendor when ~1/4 full	Monthly AST inspection + refill receipts
you should know all my tanks from the app itself				

Who delivers fuel, how do you get billed, and what paperwork does each refill create?

Reladyne, they give me a receipt, I sign the receipt and send it back to the business office. I have to track how much fuel is purchased every month.

Have you ever run dry or had a compliance scare? What would have prevented it?

If I was told earlier, the company is willing to supply us with a guage where they will come fill it when it is low without me doing anything. I need to set that up.

7. Food & beverage

Describe the restaurant operation.

Days/hours, staff, menu size, who orders food/supplies, which vendors (Sysco? US Foods? Menards runs?).

7 days a week, 10ish hours a day, us foods, i make the orders. We only have 3 employees right now

The Wednesday graduation party — walk through the whole thing.

Headcount, setup checklist, food prep, staffing, billing, cleanup. What goes wrong most often?

food prep, headcount, cleanup etcc

What health / safety logging do you have to keep?

Temp logs, cleaning schedules, inspections and their dates.

I would liek to keep cleaning logs, have to sign fire extinguishers monthly, I need to delegate that task

What other recurring events use the restaurant or pavilion?

noone

8. Pro shop

What does the pro shop sell, and how is merchandise tracked and reordered?

Shirts, balls, tees, divot tools, hats, shoes, polos, 7769

What system runs tee times / point of sale, and does anything need to flow between it and your app?

golfnw, rectrac

9. Course & turf

The app already has: course map with pins/photos, irrigation zones & schedules, chemical logging with REI/RUP reporting, spray windows, GDD tracking, crew scheduling, equipment service history, voice log, standards plan.

Which of those do you ACTUALLY use? Which do you ignore, and why?

Brutal honesty here shapes what gets deleted or simplified.

I would like to use all of it but its so much work setting it up correctly. I just need a easier way to set i up. Hopefully you fable can do better than opus in this area. I have to chase down bugs constantly when opus builds. It is very time consuming.

Pesticide application: walk through one spray day.

Planning, weather check, mixing, applying, logging, REI posting, license info. What's manual that shouldn't be?

Do your research on how this should be done.

Porta potties: how many, where, who services them, on what schedule, and what do you have to track?

2

Repairs — course, buildings, equipment. How does a repair get noticed, done, and recorded today?

the work orders, we track that but it needs to be tracked better probably

10. Employees

What do you track (or wish you tracked) about employees?

Schedules, time off, call-outs, sick time, certifications & expiry dates (pesticide license!), training, disciplinary notes, 1:1s, onboarding.

all of the above

What licenses/certifications exist in the operation and when do they expire?

Yours included. These become automatic renewal reminders.

food handling, cash handling, and ill have to add some later.

11. Tournaments & events

List the annual events — tournaments, leagues, outings, holiday events.

Rough dates, size, and which ones create the most work.

thursday commanders league, wednesday league, we currently have no holiday events or outings that I am aware of

What does event prep look like, and what falls through the cracks?

I need you to set this up

12. Deadlines that can NEVER be missed

Top 10, in order of consequence. These become the app's non-negotiable alarms with lead-time warnings.

Deadline	When	What happens if missed
<i>Section 889 vendor certs re-signed</i>	<i>Oct 1</i>	<i>Can't purchase from vendor until fixed</i>
1.		
2.		
3.		
4.		
5.		
6.		
7.		
8.		
9.		
10.		

13. What's messy — be brutal

Rank your top frustrations with the current app.

“Too many menus”, “I can’t find X”, “too many taps to do Y”, “the crew won’t use it” — whatever is true.

If the app could only do FIVE things, what five would you keep?

This defines the home screen.

What features should be deleted or hidden entirely?

Describe your perfect morning with the app.

You walk in at 6am with coffee. The app shows you _____ and you're done planning by _____.

14. Data living in other systems

You mentioned info in another site that needs to be transferred. One row per outside system:

System / site	What data is in it	Export options you can see	How often it changes
DPAS	All federal assets w/ serials & custodian	Excel report from Inquiries menu	A few times a year

For the most important one: can you log in, run an export, and save the file?

If yes — do it and include the file in the drop folder (Section 17). Even a messy export is enough to build an importer. If the site can't export, screenshots of the list pages work too.

15. Devices & environment

What devices does each person use, and where does connectivity die on the property?

Phones (Android/iPhone), tablets, the office PC, printers you must print to (schedules, forms).

16. What does success look like?

Six months from now, the rebuilt app is a home run. What's different?

Time saved, deadlines never missed, less paper, crew actually using it, leadership off your back — in your words.

I kind of think the best option is to have all of these categories and have an app assistant for each of the pages or whatever that I can just ask it to do things within that page, Like if i have anothe inspection document, I want to be able to upload that document to the ai and it add it to the list or whatever. on the tournaments page, I want to just be able to tell it when a tournament is being scheudled. If I have a new employee, on the staffing page I just say that I hired someone and give them their name and stuff. Idk stuff where I don't have to do a bunch of work and I can just ask the ai assistant to do it and it completes it with no mistakes or chasing down errors or anything like that. Just ask once, maybe answer a few verifying questions and the ai assistant just completes it
--

17. File drop — include these with the worksheet

Make a folder next to this file (call it “worksheet files”) and drop in whatever you have:

- Blank copies (PDF or photo) of every form from Section 4 that the app doesn't already fill.
- An export or screenshots from each outside system in Section 14.
- Photos of any paper logs you keep (tank logs, temp logs, porta potty schedule on the wall...).
- A copy of the report leadership asks you for most often.
- The event calendar or tournament list if one exists anywhere.

What happens next

1. You hand the worksheet + files back to Claude.
2. Claude turns it into a blueprint: the screens, the categories, the alarms, the imports — for your sign-off.
3. The app is restructured in stages on the SAME database, so nothing you've entered is ever lost.

Veterans Memorial Golf Course — GreenKeeper Pro — Operation Blueprint Worksheet
